

S604 SERIES

MULTIFUNCTION POWER METERS

The S604 series includes innovative three-phase network analyzers for the measurement and storage of electrical parameters. All versions for TA standard 1/5 A, for direct link up to 80 A or for Rogowski coils input, enclose the ideal functions for energy management applications. Depending on the model, the device can communicate through the RS485 serial port with ModBUS RTU / ASCII or through the Ethernet port with ModBUS protocol TCP-IP. Onboard Ethernet models is very useful the Web server interface to remotely manage surveys and export logged data for energy audits. The top features of the advanced versions ENERGY Plus are 8 MB for data logs, the recording of harmonics up to 15th and the recording of MIN./AVG/MAX values of all the active and reactive powers.

INSERTION MODE

- Three phase 4 wires
- From 3x400 V to 3x415 V threephase 3 wires
- From 230 V to 240 V single phase

POWER SUPPLY

- Self-Powered models
- Auxiliary supply models

DIGITAL I/O'S

- #1/2 alarm/pulse output
- #1 average values calculation (DMD)

DATA STORAGE

- Active/Reactive Power average values recording (S604B – Basic versions) or All Power MIN/AVG/MAX values di tutte le potenze (S604E Energy Plus versions)
- Up to 8 MB memory for data recording

TYPICAL APPLICATION

- Monitoring system and energy control.
- Individual machine load monitoring.
- Power peak control
- Switchboards, gensets, motor control centers etc.
- Remote metering and cost allocation

SETTINGS

- ENERGY POWER PACK (software)
- Web Server
- Front Key buttons

OPTIONAL COMMUNICATION

- ModbBUS RTU/ASCCI (RS85 port)
- ModBUS TCP-IP (LAN port)

ENERGY COUNTERS AND MEASUREMENTS

- Total counters
- Inductive / capacitive independent counters
- Bidirectional measurement on 4 quadrants for all powers and energies
- Energy efficiency parameters measurement

THD & HARMONICS

- Current / Voltage THD Values
- Current / Voltage THD Values up to 15th harmonics

CURRENT INPUT

- Version for 1 or 5A CT, for direct connection up to 6A or 80A
- 3 current measurement scales for Rogowski model

RC150 ROGOWSKI COILS

An air-cored toroidal winding is placed around the conductor, the magnetic field produced by the current induces in the coil a voltage proportional to the rate of change of current. Integrating this voltage the output becomes proportional to the current (as for a current transformer). Coil length varies from 25 to 300 cm for a cord diameter up to 8 mm

TECHNOLOGY

- The junction point is insensitive to both the position of the internal conductor and to currents carried by external conductors
- Coil and cable shielded against electromagnetic noise

ENGINEERING

- Cross section reduced up to approx. 8mm
- High flexibility

CALIBRATION

- Better than 1% accuracy, even close to the junction point
- Accessible calibration point for easy recalibration, if required

OPTIMAL LOCK

- Secure lock even in presence of vibration and/or pull-ups
- Stable lock ensuring repeatability in measurement

INSTALLATION

- Limited access applications
- Non-Intrusive Current Measurement

TYPICAL APPLICATIONS

- Very high current monitoring
- Harmonics and transients monitoring
- DC ripple measurement
- Power monitoring and control systems
- Measuring devices, lab instrumentation
- Welding machine control

INSTALLATION

ACCURACY RANGE

HIGH PERFORMANCE ROGOWSKI COILS

RC150

Rogowski coils have been used for the detection and measurement of electric currents for decades. They are based on a simple principle where an “air-cored” coil is placed around the conductor in a toroidal fashion and the magnetic field produced by the current induces a voltage in the coil. The voltage output is proportional to the rate of change of current. This voltage is integrated, thus producing an output proportional to the current. By using precision winding techniques, especially developed for the purpose, the coils are manufactured so that their output is not influenced by the position of the conductor within the toroid, and to reject interference from external magnetic fields caused, for example, from nearby conductors. Basically, a Rogowski coil current measuring system consists of a combination of a coil and conditioning electronics. Rogowski coil current transducers are used for the AC measurement.

TECHNICAL FEATURES

GENERAL DATA

Coil length	From 25 to 300 cm
Coil diameter	From 8 ±0,2 mm to 57 cm
Cable length	3 m
Lock	Bayonet
Protection Degree	IP67
Material	UL94-V0
Operating temperature	-30..+80°C
Weight	da 150 a 500 g

ELECTRICAL DATA

Output level (RMS)	100 mV / 1 kA @50 Hz (standard)
Transducer resistance	70..900 Ω (RC150) 300..2.000 Ω (RC190)
Accuracy	Better than ±1% reading valuer (conductor diameter 15 mm)
Frequency	From 40 Hz a 20 kHz
Working voltage	1.000 Vrms CAT III, 600 Vrms CAT IV, pollution degree 2
Test voltage	7.400 Vrms / 1 min

STANDARD

Marking	CE
Norms	EN 61010-1, EN 61010-031, EN 61010-2-031, EN 61010-2-032

APPLICATION NOTE

ROGOWSKI COIL KIT / SPARE PARTS

S60B-ROG and S604E-ROG models are supplied as KIT in bundle with 3 Rogowski coils available in 3 different circumferences (30, 45, 70 cm)

PROGRAMMING SYSTEM

ETHERNET / MODBUS COMMUNICATION / PROGRAMMING

FRONT KEY BUTTONS

Readings, settings and recording are available through front key buttons with 7 display page groups management.

Configuration tool for Energy power meters SERVER S604B and S604E. ENERGY POWER PACK assures reading and visualization of all measurements, it also provides a overall setup of parameters, downloading and converting recording and it manages remote connections

By Web Server it's possible visualizing all device values and associate a recording exportable into a csv file
