omniace RA3100

C

not

AD

Omniace RA3100 is a data acquisition system for research, development, and field maintenance, which enables accurate and long-term measurement of high-speed switching waveforms, even in severely noisy environments, in electric automobiles, electronic appliances, railroad cars, and solar power generation systems utilizing inverter control technology that has become widespread in recent years.

Multi-channel input

High speed sampling

Long-term recording

High-speed and High-definition printing

Various recording method

Input modules

Excellent visibility and operability

Various Monitor Displays

Max 36ch (analog input) Max 144ch (logic input)

Max 20MS/s

Memory capacity 4GB (when 18 channels are used, 20MS/s, 5 seconds) 256GB SSD (1MS/s, 59 minutes when using 36 channels.)

Maximum chart speed 100mm/s Back up to SSD even if there is no chart paper.

Recording to Memory, SSD, and Printer. All data can be measured simultaneously.

Voltage,High-Voltage(1,000V), Temperature, Strain,Acceleration,Pulse and Logic Input Module

12.1-inch LCD with touch panel provide you excellent visibility and operability.

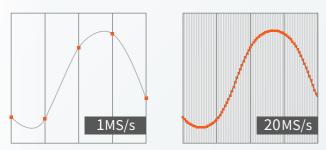

Data being measured can be played back without ending the measurement.

Y-T waveform, X-Y waveform, and FFT analysis can be displayed on the LCD monitor during measurement.

High-speed Sampling and High-definition Measurement

at 20MS/s with 18ch for 5 seconds

"The 2ch High-Speed Voltage Module" is an input module for high-speed sampling at the highest level of the series. Includes the ability for a sampling rate of 20MS/s, input voltage up to ±500V, and 14bit resolution. 9 modules can be installed in the main unit, allowing for 18-channel high-speed memory recording.

Long-term Recording

Various recording speeds, multiple channels, and a high-capacity storage medium to support a large amount of data are included as standard.

Recording desired signal accurately without missing detailed changes.

SSD

4GB

5 seconds)

256GB (when 18 channels (when 36 channels are used, 20MS/s, are used, 1MS/s, 59 minutes)

High-speed, **High-definition Printing**

High-resolution waveform printing at high speeds (100mm/s) is possible.

Even if the chart paper runs out, recorded data is backed up to the SSD and can be printed out later.

Multi-channel Input

ë n ë z

AND

"The 4ch Voltage Module" allows 4-channel input with a single unit. 9 modules can be installed in the main unit, allowing 36-channel recording.

"The 16-channel Logic Module" allows 16-channel logic signal input with a single unit. 9 modules can be installed in the main unit, allowing 144-channel logic signal recording.

> Max 36ch with analog input

Excellent Visibility and Operability

The LCD display with touch panel allows zoom in and out, and scrolling through the waveform simply, allowing a dynamic waveform drawing and operability like a smartphone.

Input Module

Up to 9 modules can be installed in the main unit. Various modules for high-speed voltage, high-accuracy voltate, logic inut, temperature measurement, and remote control are available.

Recording during monitoring

Various Recording Method

"Memory", "SSD", and "Printer" are provided as data recording destinations. Data recording can be performed at three destinations at the same time. This can be selected freely depending on the measurement purposes.

Selectable for SSD Recording

Normal Data and Peak Data

Omniace is a digital recorder that performs analog to digital conversion on all inputs and records those signals. Due to the relationship between the speed of analog to digital conversion and the frequency component of the input signal, the data may or may not be measured correctly.

Normal Data

Normal data is recorded at each designated sampling speed. (\Box points) If the signal changes too fast relative to the sampling speed, the data singular point (peak value) may not be recorded. Memory recording can measure this type of data.

Peak Data

Peak data is sampling (**II**, **II**, and **D** points) between the designated recording speed at the fastest AD-conversion rate, and records two data points, the maximum value (**II** points) and the minimum value (**II** points). The amount of data can be compressed without losing the data singular point (peak value). Printer recording records data of this method on the chart paper.

Sampling spee

Various Monitor Displays

Input signal and recorded data can be displayed as Y-T waveform display, X-Y display, and FFT.

nput module settings

Measurement conditions

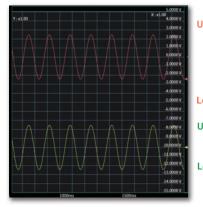

Measurement: Display

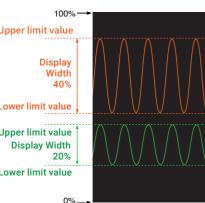

the current input signal Playback: Play back

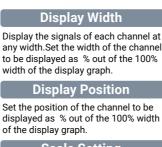

2 Monitoring device

Set the signal display width and display position.

Signals can be drawn at any position on the graph at any width. You can easily draw a 100V signal in the width of 1 div.

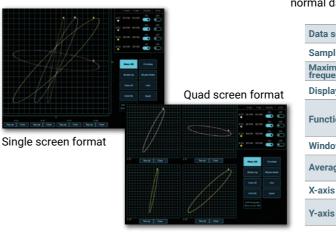

Scale Setting

Set the upper limit/lower limit value of display for the display width of each channel as an input value or a physical conversion value.

X-Y waveform Display

An X-Y waveform can be drawn by specifying 4 channels for the X-axis and 4 channels for the Y-axis. The screen format can be displayed a large single screen format, or devided four screen formats for the each X and Y axis channels. The pen can also be moved up or down, and the grid can be turned on or off.

Recording Mode Selection

Nine measurement patterns are prepared as Recording modes. "Recording Mode" can be selected from Measurement starts by manual operation, Measurement starts from a trigger signal or Repeating measurement, etc. When "Recording Mode" is selected, the necessary set-up menu is displayed and can be easily set.

PC Compatibility

Web server. FTP server

The RA3100 can be remotely operated from a web browser (operating PC). The web browser displays the same screen as the RA3100 main unit with pseudo operation panel keys (START key, etc.) to make settings and start/stop recording. Additionally, data stored on the RA3100 can be transferred to a PC.

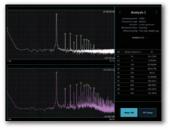

Windo Avera X-axis Y-axis

7

FFT Analysis

FFT analysis is performed for any two signals. The top 10 highest values can be read from the analysis results, and the value of any analysis result can be read using the cursor. (FFT analysis can be performed on normal data recorded in SSD.)

selection	Select from the input signal or recorded data
ling	1000, 2000, 5000, 10,000
num analysis ency	1/2 times of the sampling frequency
ay format	1 screen, 2 screens.

Software for displaying measurement data*1

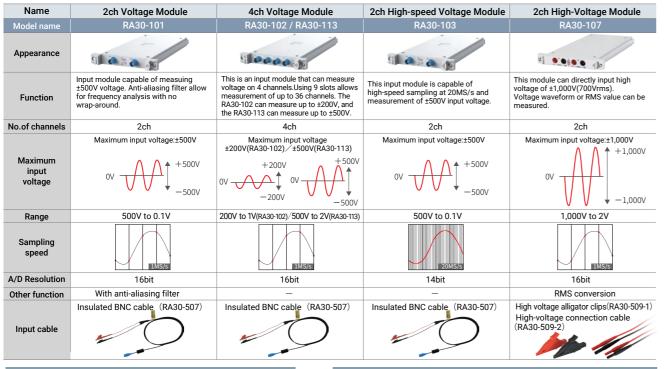

"RA3100 Viewer" is software to display recorded data exported to external media from an RA3100 on a PC.

PC software for converting measurement data*1

The "File Converter" software can convert recorded data exported to external media from an RA3100 to CSV or ASAM MDF *2 (Ver. 4.1) files on a PC.

*2 ASAM : Association for Standardization of Automation and Measuring Systems MDF : Measurement Data Format

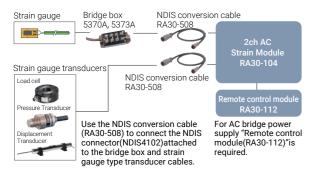

Various input modules

Voltage input modules 5 types Lineup of input modules for measuring many voltage signals from small to high

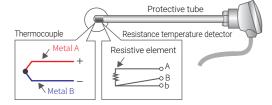

2ch AC Strain Module RA30-104

This input module enables stress measurement using strain gauges as well as strain gauge transducers such as load cells, pressure transducers, and torque transducers. The AC bridge method can be used for measurement that is strong against external noise.

2ch Temperature Module RA30-106

An input module for a thermocouple or resistance temperature detector. Thermocouples can be used for high temperatures and wide temperature ranges, while resistance thermometers can be used to measure temperatures near room temperature with high accuracy.

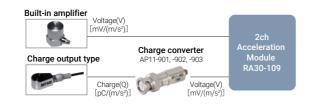

Features of Thermocouples and Resistance Temperature Detectors

couple	Advantages	Disadvantages
enomenon that a ten a temperature the contact points at eated by connecting netal wires.	Low cost, high temperature and wide temperature range (-200 to 2,300°C), small temperature measurement objects, measurement in confined spaces, fast thermal response	
erature detector	Advantages	Disadvantages
henomenon that e of metals in temperature.	High accuracy (compared to Thermocouple), no reference junction required	Large form factor, slow response, narrower temperature range (-200 to 850°C) than thermocouple, expensive weak against vibration and shock

2ch Acceleration Module RA30-109

This module can measure acceleration, speed, and displacement of mechanical vibration using a piezoelectric acceleration transducer (built-in amplifier, charge output type). For mathematical functions, RMS conversion, and then envelope processing can be performed.

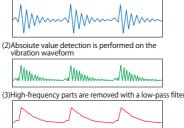

Envelope processing

Envelope processing helps to identify abnormal areas of bearings (inner rings, outer rings, and rollers/balls) by looking at the periodicity of vibrations caused by bearing flaws. Envelope-processed

signals are subjected to frequency analysis and the resulting primary frequency and information such as the size of each bearing part, the number of rollers and balls, and the shaft rotation speed can be used to infer the damaged part.

Envelope processing depiction

(1)Vibration waveforms caused by scratches on bearings are mesured through a bandpass filter

Frequency

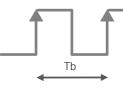

Period, rotation speed, pulse count, etc. can be measured for the input pulse signal Measurement result data such as period, rotation speed, pulse count, etc., and the input pulse signal can be saved.

Measurement Mode

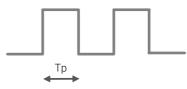

Period

Measures the period of the measured pulse. (s: seconds) Measures the width (Tb) from leading edge to leading edge of the pulse.

Pulse Width Mode

Measures the pulse width (Tp) from leading edge (trailing edge) to trailing edge (leading edge) of the pulse. (s: seconds)

Rotation Speed Mode

Measure the rotation speed of the measured pulse. (rpm: rotations) Rotation speed (rpm) = 60 / (Measured period x No. of pulses per revolution)

* The number of pulses per revolution can be set from 1 to 100.

The gear to the left has 11 teeth, so the number of pulses per revolution is 11.

Range of Variation Mode

Measures the variation from the measured frequency and the set center frequency. (%)

Range of variation (%) = Measurement frequency / Center frequency

The illustration below shows the range of variation from frequency analysis data.

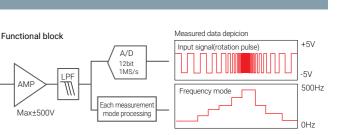

Therr

difference is applied to t both ends of a circuit cr two different types of m

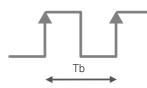

Resistance temr

A sensor utilizing the ph the electrical resistance changes with changes i

Frequency Mode

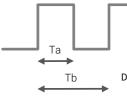

Measure the frequency of the measured pulse. (Hz: hertz) Calculates the period from the width (Tb) from leading edge to leading edge of the pulse.

f (Hz) = 1 / Period (Tb)

Duty Ratio Mode

Measures the pulse ratio (Ta/Tb) from leading edge (trailing edge) to trailing edge (leading edge) of the pulse (%)

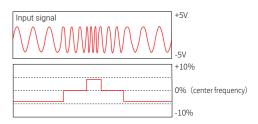

Duty ratio = Pulse width (Ta) / Period (Tb)

Power Frequency Mode

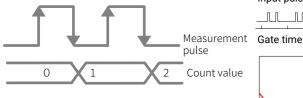

Measures fluctuations in power supply frequency (50/60/400Hz).

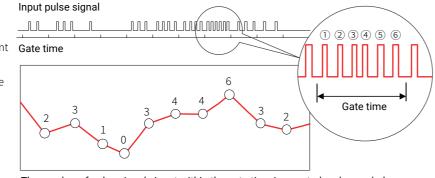

Pulse Count Mode

Integrates the number of pulses confirmed from pulse leading edge (trailing edge) to trailing edge (leading edge) within the gate time. The count value is cleared at every gate time.

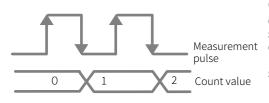

The number of pulse signals input within the gate time is counted and recorded.
Maximum integration: Up to 40,000 counts can be counted. (Minimum pulse width: 2.5µs)

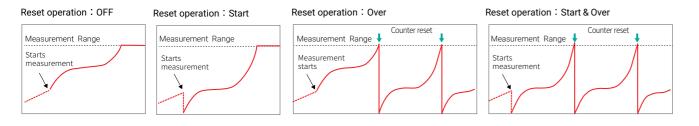

Pulse Integration Mode

Integrates the number of pulses when the pulse is confirmed from leading edge (trailing edge) to trailing edge (leading edge) of the pulse.

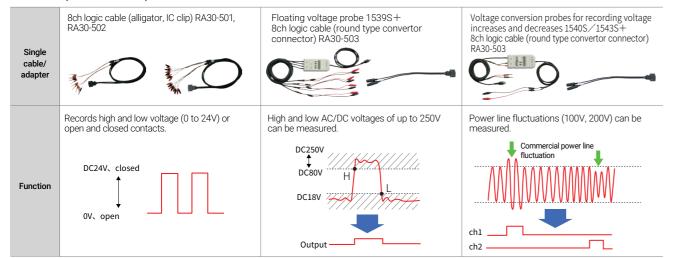

Count value reset operations

- **OFF** : Count value is stopped at the range upper limit.
- Measurement **Start :** When recording starts, the count value is reset and then stopped at the range upper limit. **Over :** When the count value reaches the upper limit of the range, the count value is reset and measurement starts again from 0.
 - Start & Over: The count value is reset when recording starts. When the count value reaches the upper limit of the range, the count value is reset and measurement starts again from 0.

16ch Logic Module RA30-105

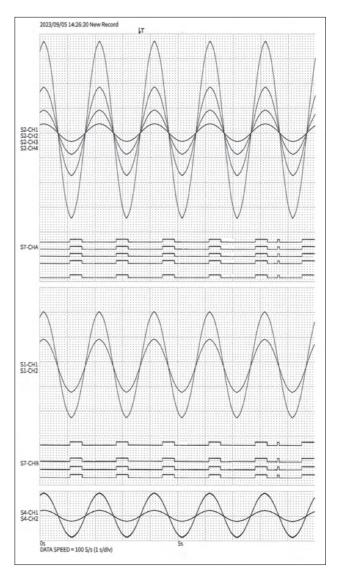

One unit of this input module can input 16 channels of logic signals and when 9 modules are installed in the main unit, 144 channels of logic signals can be measured. Detects and records high and low voltage (0 to 24V) or open and closed contacts. Furthermore, by connecting probes, it is possible to measure high and low AC and DC voltages up to 250V and power line variations (100V and 200V).

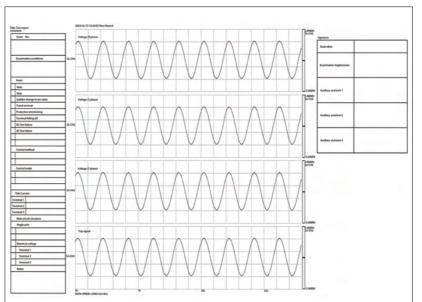

High-speed, high-definition recording

High-speed (100mm/s) and high-definition (80dots/mm at 25mm/s) recording is possible. The maximum number of signals that can be recorded simultaneously is 48.

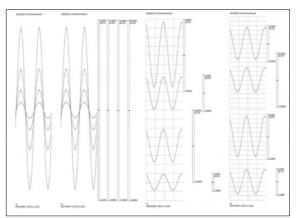

In addition to signals, the recording name, measurement start time, trigger mark, recording speed, etc., can be printed. You can freely change the number of graphs to record, the width of each graph (2.5mm to 215mm), and the space between graphs. In addition, the position and amplitude of the event signal can be changed every 8 channels.

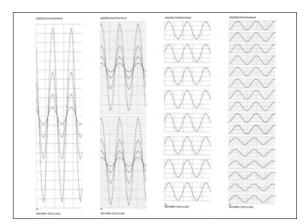

Auto scale

The scale can be printed after recording.

Recording division

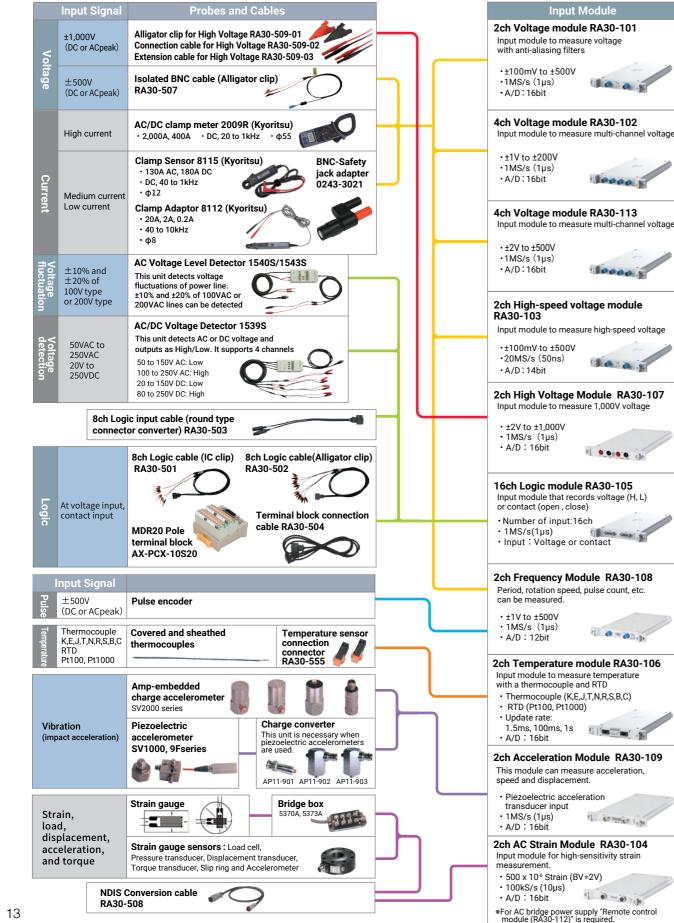

Records can be divided from 1 to 18. Recording width can be adjusted from 215mm to 2.5mm.

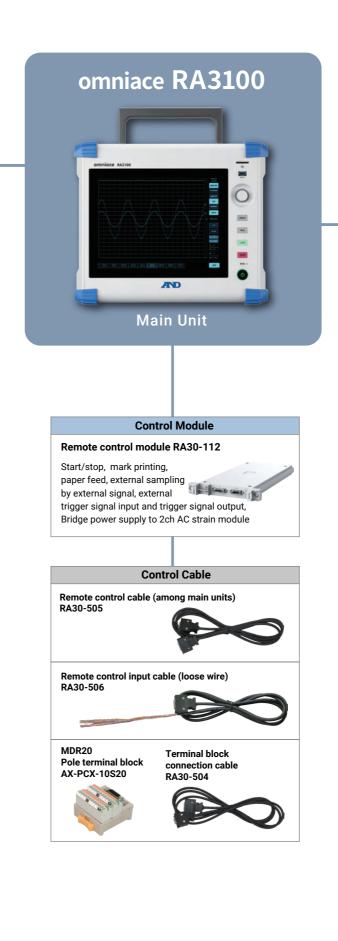

Headers / Annotations / Footers

When recording waveforms to the printer, an arbitrary character string can be printed before (header), during (annotation), and after (footer) the waveform recording.

	ording Function S	pecifications
	Function	After data is recorded to the internal memory at the set sampling rate,
	Memory Capacity	the data is automatically saved to the SSD. 4GB (2G points/ch)
	Data Type	Normal data, Can be saved to a CSV file (trigger criteria 1 to 100%)
	Memory Division	1 to 200 Div. (The maximum value changes depending on the channel used and recording length)
	Number of data	2,000 to 2G point/ch (1-2-5 step : The maximum value changes de- pending on the channels and division number used)
	Sampling Speed	20MS/s (50ns) to 10S/min, Max. 18ch for 20MS/s when simultaneous measurement
	Maximum	100days
	Recording time Recording Operation	by START/STOP button for Time recording, Interval recording, and START trigger recording
	Function	The measurement data of the input signal is directly recorded to the internal SSD.
	Data Logging Capacity	Internal SSD (256GB)
	Data type	Normal data and peak data selectable
	Sampling Speed	1MS/s (1µs) to 10S/min, Max. 500kS/s in case of peak data Synchronous clock: 250kHz or less
	External Synchro- nization Sampling	Recording by external synchronization can be either SSD recording or printer recording (Pen Record recording).
	Maximum Recording Time	100days
	Recording Operation	by START/STOP button for Time recording, Interval recording, START trigger recording, window recording
	Window Recording	The data is recorded in the ring buffer area (max. 2G point/ch) speci- fied as the window recording time. When the data is exceeded the data areea, overwrite from the top the data area and record all data up to the end of measurement. SSD recording can not be used with memory
		recording and printer recording at the same time. The data format is normal data.
1	Function	Outputs the input signal directly to the printer.
	Paper Width	219.5mm
	Effective Recording Width	Maximum 215mm
	Recording Operation	by START/STOP button for Time recording, Interval recording, START trigger recording : Waveform recording on the chart paper while saving the data to the SSD. Playback and copy is possible after recording. by PRINT button(Pen-Recording): Direct waveform recording to chart paper without saving any data. Chart speed and measuring range can be changed during recording.
	Number of Recording Channels Data Type	Max. 48 channels per sheet, Measuring channels can be divided in 3 sheets. Peak data
	Data Type	100mm/s (1kS/s) to 1mm/min (10S/min), User Default Setting en-
	Chart Speed	abled. Max. 50mm/s (500Hz) at external synchronization *Recording by external synchronization can be either SSD recording or printer recording (Pen Record recording).
	Printing Density	Amplitude axis : 8dots/mm Time axis : 80dots/mm (at 20mm/s), 40dots/mm (at 50mm/s), 20dots/mm (at 100mm/s) 40dots/mm (at external synchronization)
C	nitor Specification	ns (on recording and replay)
		Displays during memory recording, SSD recording, and printer recording
		Normal data, Peak data Max. 48 channels per sheet (screen), Measuring channels can be
	(Screen)	divided in 3 sheets (screen). 1 to 18 (The height of each graph on the recording paper can be
	Number of Graphs	changed in increments of 2.5mm.)
	Grid Count	Vertical : 20div., Horzontal: 20div. (when 1 graph is displayed on screen)
	Time Axis Data Count	100data/div Numeric display, Signal Name, Amplitude Axis Scale, Recording Time,
	Display Function	Trigger Mark, Cursor, Thumbnail The signal of each channel is displayed at an arbitrary width (Set by %
	Display Width	as the full display graph width is 100%)
ł	Display Position	Display the signal of each channel at any position (Set by % as the full display graph width is 100%).
	Scale Setting	Set the upper limit/lower limit values as input values or physical con- version values for each display width.
		16ch logic waveform display position movable
		Displays during SSD recording
	Recording Function Supported Data Type	Normal data
	Recording Function Supported Data Type Sampling Rate	Normal data 1KS/s or less
	Supported Data Type Sampling Rate Display format	1KS/s or less 1 screen (up to 4 concurrent waveforms), 4 screens (1 waveform per graph

Other Specifications			
Recording Mode		There are nine selectable measurement modes. Normal recording/Start time/START trigger/Interval time (N times)/Start time + START trigger/Start time + Interval time (N times)/START trigger + Interval time (N times)/Start time + Interval time (N times)/Window recording	
Playback Processing	Scaling	The display position can be changed with pinch-in, pinch-out scaling, zooming, and swiping.	
	Cursor	Y-T : Measured value at the cursor position Time display between cursors, Max/Min value/Average value FFT : Cursor position frequency and pulse amplitude	
	Back Scrolling	Measured data can be monitored while recording by pressing the [PAUSE] button.	
	System Annotations	Measurement start time, Recording name, Trigger condition (Trigger point, Trigger date, Trigger time) Sampling speed, Chart speed, Time axis, etc. are printed at the same time as waveform recording	
Printer Section	Mark Print	Printing marks (date/time) on the chart paper or the data on SSD	
	Header, Footer, and Page Annotations	Any character can be printed before, during, or after the waveform area during printing (Up to 60 characters horizontally and 86 lines vertically)	
	Screen Copy	Print screen image on chart paper	
Screen Ima	age Saving	Save screenshots in PNG format (color) on the main unit or on a storage medium	
Save/Readout of Settings		Save settings (input and main unit setting conditions) on SSD Measuring conditions saved in the SSD can be read out.	
Keylock Function		·Lock operation panel keys ·Lock the touch panel	
Monitor Br	ightness	Adjustable	
Physical Value Conversion		Physical conversion of input signals, Change of full scale on display, Rregistration of units.	
Language		Japanese, English, Chinese (simplified, combined), Korean	

Remote Control Module Specifications

Remote	Control Module F	A30-112 Specifications
Input Connector		half-pitch 20-pin connector
Output Connector		half-pitch 14-pin connector
External		Function : Control by external signal.
	Control Signal	START/STOP, MARK, FEED, PRINT, TRIG
	Input Level	High level : 2.1V to 5.0V, Low level : 0V to 0.5V (active low)
	Response Speed	Select from High-speed/Normal/Low-speed
	Effective Pulse Width	High-speed response : 1µs or higher during high interval, 1µs or higher during low interval Normal response : High interval 1ms or higher, Low interval 1ms or higher Low-speed response : 10ms or higher during high, 10ms or higher during low-speed response
	Max. allowable Input Voltage	30V
External	Output	Function : Control signals can be externally output
	Control Signal	START/STOP, MARK, FEED, PRINT, TRIG, EXT1/EXT2
	Output Level	High level: 3.8V to 5.0V, Low level: 0V to 0.5V (active low)
	Output Pulse Width	START/STOP, FEED, PRINT : Active output during operation TRIG, MARK : High-speed response: 1µs/Normal response : 1ms/ Low-speed response: 10ms
External (EXT.SM	Sampling Input PL IN)	Synchronization via external clock signal is possible (simultaneous SSD recording and printer recording are not possible.)
	Input Level	High level : 2.1V to 5.0V, Low level : 0V to 0.5V
	Effective Pulse Width	High-speed (SSD Recording) : 2µs or higher/Low-speed (Printer Recording) : 1ms or higher
	Maximum Input Frequency	High-speed (SSD Recording) : 250kHz/Low-speed (printer recording) : 500Hz, 0.1mm/pulse
External (EXT.SM	Sampling Output PL OUT)	Function: Synchronization clock signal can be output externally
	Output Level	High level : 3.8V to 5.0V, Low level : 0V to 0.5V (active low)
	nization Signal for n Input/Output	Function : Synchronization signal generator for using AC strain
	Carrier Wave	0V to 5V, square wave, 5kHz
	Synchronization	Synchronization possible with other RA3000 product including RA30-112
Reference Calibration	e Clock for on	Function : Square wave signal output for operation check of voltage input module
	Output Level	0V to 5V (±1%)
	Output Frequency	1kHz (±1%)
	Duty Ratio	50% (±5%)
Withstand voltage		AC300V, 1 minute (between input/output and main chassis)
Maximur Ground	n Rated Voltage to	AC, DC42V
Dimensio	ons	Approx. 140 (input-side W) x 223(D) x 20(H) mm
Weight		Approx. 250g
Compliance Standards		Safety : EN61010-1 EMC : EN61326-1, class A

334

Unit: mm

Input Module Specifications

2ch Voltage Module I	RA30-101		
Input Channels	2ch		
Input Connector	solated BNC connector		
Input Type	solated unbalanced input (Isolation between each channel, between each channel and main chassis)		
Input Coupling	AC, DC, and GND coupling		
Input Impedance	1ΜΩ		
Measurement Range(RANGE)	±100, 200, 500mV, 1, 2, 5, 10, 20, 50, 100, 200, 500V		
Measurement Accuracy	±0.3% of range (23°C±5°C, DC coupling, LPF 3Hz, after zero offset)		
Temperature Coefficient			
Frequency Response	DC coupling : DC to 100kHz(-3dB to +1dB)(with LPF, AAF OFF) AC coupling : 0.3Hz to 100kHz(-3dB to +1dB)(with LPF, AAF OFF)		
Low-pass Filter(LPF)	Cutoff frequency: 3Hz, 30Hz, 300Hz, 3kHz, OFF (-1.6dB±1dB) Characteristics: 2 pole Bessel type		
Anti-aliasing Filter(AAF)	Cutoff frequency : 20, 40, 80, 200, 400, 800, 2k, 4k, 8k, 20k, 40kHz, OFF Attenuation : -66dB or less at 1.5 times of cutoff frequency		
A/D Converter	A/D resolution : 16bit Sampling rate : 1MS/s (max)		
Allowable Input Voltage	±500V peak		
Maximum Rated	300V AC/DC CATII(between channels, between input terminals and		
Voltage To Groud	chassis)		
Withstand Voltage	3kV AC, 1 miute (between input terminal and main chassis, between each channel)		
Dimensions	Approx. 140 (input-side W) x 223(D) x 20(H) mm		
Weight	Approx. 300g		
Compliance Standards	Safety:EN61010-1, EN61010-2-30 EMC:EN61326-1, class A		

4ch Voltage Module	RA30-102, RA30-113		
Input Channels	4ch		
Input Connector	isolated BNC connector		
Input Type	Isolated unbalanced input (Isolation between each channel, between each channel and the main chassis)		
Input Coupling	DC and GND coupling		
Input Impedance	1MΩ or higher		
Measurement Range (RANGE)	RA30-102:1, 2, 5, 10, 20, 50, 100, 200V RA30-113:2, 5, 10, 20, 50, 100, 200, 500V		
Measurement Accuracy	±0.2% of RANGE (23°C ±5°C, DC coupling, LPF 3Hz, after zero offset)		
Temperature Coefficient	±(400ppm of range)/°C		
Frequency Response	DC coupling : DC to 100kHz(-3dB to +1dB)(with LPF OFF)		
Low-pass Filter(LPF) Cutoff frequency : 3Hz, 30Hz, 30Hz, 3kHz, 0FF (-1.6dB±1dB) Characteristics : 2 pole Bessel type			
A/D Converter	A/D resolution : 16bit Sampling rate : 1MS/s (max)		
Allowable Input Voltage	RA30-102 : ±200V peak / RA30-113 : ±500V peak		
Maximum Rated Voltage to Gourd	300V AC/DC CATII (between channels, between input terminals and chas- sis)		
Withstand Voltage	3kV AC, 1 miute(between channels or between input terminals and chassis)		
Dimensions	Approx. 140 (input-side W) x 223(D) x 20(H) mm		
Weight	Approx. 320g		
Compliance Standards	Safety: EN61010-1, EN61010-2-30 EMC: EN61326-1, class A		

2ch High Speed Volta	ige Module RA30-103	
Input Channels	2ch	
Input Connector	Isolated BNC connector	
Input Type	Isolated unbalanced input (Isolation:between channels, between each channel and chassis)	
Input Coupling	AC, DC, and GND coupling	
Input Impedance	1MΩ or higher	
Measurement Range (RANGE)	±100, 200, 500mV, 1, 2, 5, 10, 20, 50, 100, 200, 500V	
Measurement Accuracy	± 0.5% of RANGE (23°C ±5°C, DC coupling, LPF 5Hz, after zero offset)	
Temperature Coefficient	± (500ppm of range)/°C	
Frequency Characteristics	DC coupling : DC to 5MHz(-3dB to +1dB) (with LPF OFF) AC coupling : 6Hz to 5MHz(-3dB to +1dB)(with LPF OFF)	
Low-pass Filter(LPF)	Cutoff frequency : 5Hz, 50kHz, 500kHz, OFF (-3dB±1dB)	
A/D Converter	A/D resolution : 14bit Sampling rate : 20MS/s (max)	
Common Mode Rejection Ratio	80dB or higher (50/60Hz)	
Allowable Input Voltage	500V peak	
Maximum Rated Voltage to Ground	300V AC/DC CATII(between channels, between input terminals and chassis)	
Withstand Voltage	3kV AC, 1 minute(between channels, between input terminals and chassis)	
Dimensions	Approx. 140 (input-side W) x 223(D) x 20(H) mm	
Weight	Approx. 300g	
Compliance Standards	Safety:EN61010-1, EN61010-2-30 EMC:EN61326-1, class A	

2ch High Voltage Mo	dule RA30-107			
Input Channels	2ch			
Input Connector	Safety banana socket			
Input Type	Isolated unbalanced input (Isolation between each channel, between each channel and main chassis)			
Input Coupling	AC, DC, and GND coupling			
Input Impedance	4ΜΩ			
Measurement mode	Voltage measurement mode / RMS measurement mode			
Response time (when RMS mea- surement mode)	High speed : 0.1s (within $\pm 10\%$), Medium speed : 0.25s (within $\pm 10\%$), Low speed : 1s (within $\pm 10\%$) * ¹ All of the above are leading edge $0\% \rightarrow 90\%$ of RANGE, trailing edge $100\% \rightarrow 10\%$ of RANGE			
Measurement Range(RANGE)	± 2, 5, 10, 20, 50, 100, 200, 500, 1,000V			
Voltage mea- surement mode:	±0.3% of range (DC coupling, LPF 3Hz)(23°C ±5°C, DC coupling, LPF 3Hz, after zero offset)			
When DC coupled	±0.3% of range (DC coupling, LPF 3Hz)(23°C ±5°C, DC coupling, LPF 3Hz, after zero offset)			
When AC coupled (Sine wave input)	For low speed response : ±0.5% of RANGE (10Hz to 1kHz input), ±1.5% of RANGE (1kHz to 10kHz input) For medium speed response : ±0.5% of RANGE (40Hz to 1kHz input), ±1.5% of RANGE (1kHz to 10kHz input) For high speed response : ±0.5% of RANGE (100Hz to 1kHz input), ±1.5% of RANGE (1kHz to 10kHz input) *All of the above are at 23°C ±5°C, after zero cancellation.			
Temperature Coefficient	± (300ppm of range)/°C			
Frequency Response	DC coupling : DC to 100kHz (-3dB to +1dB) (with voltage measurement mode, LPF OFF) AC coupling : 0.3Hz to 100kHz (-3dB to +1dB) (with voltage measurement mode : LPF OFF)			
Low-pass Filter(LPF)	Cutoff frequency : 3Hz, 30Hz, 30Hz, 3kHz, 0FF (-1.6dB±1dB) Characteristics : 2 pole Bessel type

Decelera- tion Stop Processing Function (Excluding pulse count mode and pulse integration mode)
Pulse/Rev Specify the number of pulses per revolution. (Rotation speed mode function Specify the pulse determination method. (Pulse width mode, Pulse cour mode and pulse integration mode only) Pulse polarity Prositive: Detects and determines a measured pulse from its leading edge to trailing edge Measured and pulse for an end determine a measured pulse from its trailing edge to trailing edge
Integration Auto-resets measurement data in pulse integration mode. Sets the court
auto-reset to zero at the start of recording (Start) and at the upper range limit (Over Pulse average ing process function Excluding pulse count mode and pulse Takes the average of the set number of measurement data as the data t be output. Effective for taking out irregularities in the input signal. However, data is not output until the set number of pulses is measured. However, data is not output until the set number of pulses is measured.
Integration mode The data detected in each measurement mode will change to a cascadi Smoothing process The waveform according to the response speed value. process The waveform can be made smooth by performing moving average processing on the cascading waveform.
However, there will be a delay if smoothing processing is enabled. Cutoff frequency : 300Hz, 3kHz, 30kHz, 0FF (-1.6dB±1dB)

Main Unit & Accessories

Item	Model	Specifications
Omniace	RA3100	Standard accessories: AC power cable × 1, recording paper × 1, paper holder × 1 pair, input module slot cover plate × 1 set, quick operation guide × 1, Instruction manual CD-ROM × 1
In most Mandada		
Input Module		
Item	Model	Specifications
2ch Voltage Module*1	RA30-101	Sample rate 1MS/s, Input ±100mV to ±500V, A/D resolution 16bit, Anti-aliasing filter
4ch Voltage Module*1	RA30-102	Sample rate 1MS/s, Input ±1V to ±200V, A/D resolution 16bit
2ch High Speed Voltage Module*1	RA30-103	Sample rate 20MS/s, Input ±100mV to ±500V, A/D resolution 14bit
2ch AC Strain Module*3	RA30-104	2ch, Max. strain input 500 x 10 ⁻⁶ strain, AC bridge method, Frequency response DC to 2kHz
16ch Logic Module*5	RA30-105	Input 16ch (voltage or contact)
2ch Temperature Module*4	RA30-106	Data update rate 1.5ms, Thermocouple/RTD, 2 temperature sensor connectors (RA30-555) included
2ch High Voltage Module*2	RA30-107	2ch, max. input ±1,000V, sample rate 1MS/s, RMS conversion
2ch Frequency Module*1	RA30-108	2ch, Pulse input, Input ±500V
2ch Acceleration Module*6	RA30-109	2ch, acceleration transducer (charge output type, voltage output type) input, acceleration, speed, displacement, TEDS compatible
4ch Voltage Module*1	RA30-113	4ch, Sample rate 1MS/s, Input ±2V to ±500V, A/D resolution 16bit

*1 Use Isolated BNC cable (Alligator clip) RA30-507
*2 Use Alligator clip for High Voltage (RA30-509-01), Connection cable for High Voltage (RA30-509-02).
*3 Remote Control Module (RA30-112) is required for 2ch AC Strain Module (RA30-104) to supply AC bridge power. Use NDIS Conversion cable (RA30-508) to connect NDIS connector (NDIS4102).
*4 A temperature sensor connector RA30-555 is provided to attach the temperature sensor to the 2ch temperature module.

*6 Use 8ch Logic cable (RA30-501, RA30-502, RA30-503), cable for connecting the terminal block (RA30-504).
 *6 When using Charge converter (AP11-902, AP11-903), use Signal cable (AS30-504).

Control Module

Main Unit

Item	Model	del Specifications		
Remote Control Module ^{*7} RA30-112 Remote control, TRIG IN and OUT, and synchronization signal output when AC strain module is used				
*7 Use a remote control module cable (RA30-505, RA30-506) to connect the remote control module to other devices.				
Signal Input Related Options				

orginal inpatriciation options		
Item	Model	Specifications
Isolated BNC Cable (Alligator clip)	RA30-507	1.5m length with an Isolated BNC - safety alligator clip (+red,-black), connected to RA30-101, -102, -103, -108,-113
Alligator clip for High Voltage	RA30-509-01	High voltage alligator clips, CAT III 1,000V, 1 red and 1 black per channel
Connection cable for High Voltage	RA30-509-02	High voltage connection cable 2m, CAT III 1,000V, S-banana plug to S-banana plug, 1 red and 1 black per channel
Extension cable for High Voltage	RA30-509-03	High voltage extension cable 2m, CAT III 1,000V, S-banana jack to S-banana plug, 1 red and 1 black per channel
NDIS Conversion cable	RA30-508	Conversion cable to connect NDIS connector (NDIS4102) of bridge box and strain gage type transducers. For 1ch, length 60cm
	AS30-503	2m length, Metal BNC to alligator clip(+red,-black), connected to RA30-109
Signal cable	AS30-504	2m length, Metal BNC to Metal BNC, connect to RA30-109 and AP11-902/903 charge converter
Signal cable	0311-5175	2m length, Isolated BNC to alligator clip(+red,-black), connected to RA30-101~103,-108,-113
	0311-5200	2m length, Metal BNC to Isolated BNC, connected to RA30-101~103,-108,-113
8ch Logic Cable (IC clip)	RA30-501	1.5m length for logic input, IC terminal clip (8ch), connected to RA30-105
8ch Logic Cable (Alligator clip)	RA30-502	1.5m length for logic input, electrical terminal clip (8ch), connected to RA30-105
8ch Logic Cable (round type connector converter)	RA30-503	30cm length conversion cable for connection to the RA30-105 from the 1539S
Cable for Terminal Block	RA30-504	2m length, connecedt to the RA30-105 or RA30-112, attach the MDR20 terminal block AX-PCX-10S20
Remote Control Cable (to connect between main units)	RA30-505	2m length, connect the RA30-112 to connect with another RA3100 unit each other
Remote Control Cable (withouot another connector)	RA30-506	2m length, connect to the RA30-112 to control the RA3100 main unit
Temperature Sensor Connection Connector	RA30-555	Connector attached to the terminal of temperature sensor connected to the RA30-106, 2 pcs/sets
MDR20 Terminal Block for AD4430C	AX-PCX-10S20	Used as terminal block for IN/OUT of RA30-105, RA30-112 signals
BNC Adaptor*8	0243-3021	Isolated BNC connector and Safety terminal plug, When using Clamp Adaptor (8112), AC/DC Clamp Sensor (8115)
Charge Converter	AP11-901	Gain 1.0mV/pC, Max Input Charge 5,000pC, Compact type
•	AP11-902	Gain 1.0mV/pC, Max Input Charge 5,000pC
(For Piezoelectric Acceleration Transducer)	AP11-903	Gain 0.1mV/pC, Max Input Charge 50,000pC, For High Sensitivity Transducer
*8 When 2ch AC Strain Module (RA30-102) is installed in an adjacent slot, BNC Adaptor (0243-3021) cannot be installed for all channels.		

B I I II A

Options Related to Current and Voltage Measurement			
Item Model Specifications		Specifications	
AC/DC Voltage Detector	1539S	4 inputs, AC/DC voltage detector that detects presence of selected low or high voltages and outputs Hi/Lo logic signal	
Voltage Fluctuation Detector	1540S	Detects 100/120V AC voltage sags & surges exceeding selected 10% or 20% of AC peak value and outputs as pulse	
	1543S	Detects 220/240V AC voltage sags & surges exceeding selected 10% or 20% of AC peak value and outputs as pulse	
AC/DC Digital Clamp Meter	2009R*9	For high current (2000A/400A, DC/40 to 1kHz), Φ55, 0311-5184 signal input cable required	
Clamp Adaptor	8112 ^{*10}	For low current (20A/2A/0.2A, 40 to 10kHz), Φ8, 0243-3021 BNC adaptor required	
AC/DC Clamp Sensor	8115 ^{*10}	For low current (AC130A/DC180A, DC/40 to 1kHz), Φ12, 0243-3021 BNC adaptor required	
Signal Input Cable for Clamp Meter	0311-5184 ^{*11}	Length: 2m, miniature plug for microphone and insulated BNC connector	

49 Use signal input cable (0311-5184) if connecting output from 2009R to RA3100.
410 Use BNC adaptor (0243-3021) if connecting output from 8112 or 8115 to RA3100.
411 Signal input cable to connect 2009R clamp meter to RA3100 insulated BNC connector.

Recording Paper

Recording raper			
Item		Model	Specifications
	Roll Paper	YPS106	219.5mm × 30m roll paper (5 rolls/box), Drawing No. 0511-3167
Recording Paper ^{*12}	Roll Paper (with perforation)	YPS108	219.5mm × 30m roll paper (5 rolls/box), perforation 300mm pitch, numbering 99 to 01, Drawing No. 0511-3166
	Z-fold Paper	YPS112	219.5mm × 201m Z-fold paper (1 set/box), folding width 300mm pitch, total of 670 sheets, Drawing No. 0511-3182
*12 Quality not assured if paper other than above is used.			

Peripheral Options		
Item	Model	Specifications
SD memory card 4G	RM11-453	4GB, industrial use (for saving setting conditions & mesured data)
SD memory card 8G	RM11-454	8GB, industrial use (for saving setting conditions & mesured data)
Z-fold Paper Storage Box	RA30-551	Including Z-fold paper adaptor RA12-301
Z-fold Paper Adaptor	RA12-301	
Recording paper holder	5633-1794	2 pcs/sets
Soft Carrying Case	RA23-183	
Hard Carrying Case with Casters	RA30-552
