#### **Application**

The pressure transmitter PASCAL CV is suited for measuring the relative and absolute pressures of gases, vapors and liquids. Typical applications are to be found in the chemicals and petrochemicals industries, in process engineering, and general process measurement technology.

The modular design of the pressure transmitter allows users to choose the best possible device for his specific operating requirements.

PASCAL CV is equipped with a variety of process connections and uses smart module technology for display, switching and communication purposes. These functional modules can be exchanged or extended with ease without having to remove the transmitter from the process.
